

Angel Secure Browser

Teacher Information:

After posting the assessment in the Lessons section, use the **Access** tab to select **High – requires Secure Browser setting**.

Set the Start and End time for the test to ensure that the test is enabled during the period that students will be taking the test in secure browser.

In the **Interaction** tab, set the **Date Enabled date and time**, and also the **Date Disabled date** and time.

Date Enabled indicates the date and time that students are able to access and take the test and Date Disabled is the date and time when the test is closed and students will no longer be able to take the test. This is different from the Start and End Date. Those indicate when the Assessment link itself is visible and do NOT govern when the test is actually open for students to access and take the test.

Student Information:

Click the Secure Browser icon on the netbook desktop.

Login the Secure Browser using Angle username and password. (You do not need to be logged into Angel to use the Angel Secure Browser.)

The tests that any teacher has set with the Secure Browser settings and that are set to be available at the time you log in will be visible.

Click the test that you are taking. The test will open in **Secure Browser** and disable all other functions (Right Click, etc.).

After complete the test, click the Submit button.
